

Korsnäs chooses Resco for Axapta implementation

The Swedish forestry company Korsnäs has given Resco the assignment to implement the Microsoft Business Solutions-Axapta business system.

Korsnäs is currently improving its financial statement and reporting procedures, and has chosen to implement the accounting module from Microsoft Business Solutions-Axapta with Resco as supplier. The value of the order is SEK 1.5 million.

"We want to obtain financial statements more rapidly and be able to actively analyse our financial results. We currently have several systems, and are now simplifying their environment by working with Axapta to achieve an overall integration. Axapta fulfilled our requirements specification well, and we chose Resco due to the good recommendations that we received," says Mats Östling, CFO of Korsnäs.

Korsnäs manufactures highly refined and specialised forestry products, and employs around 1,200 people in Sweden. Korsnäs' production is essentially focused on cardboard and paper products for the packaging sector, as well as fluff pulp for hygiene products.
